One of my most useful tools in Adobe Photoshop. We'll be using it often so learn to use it first.

- [Click here to see the video version of this tutorial.](#)
- To demonstrate the use of this tool we will work with this image.
 - First open your image in Adobe Photoshop.
 - Select the clone tool by clicking [here](#) or press S.
 - Use a bigger brush, I used 79px
 - We will remove the blue car, first keep the clone tool over the street next to the car, press ALT and click the area you wish to copy like this:
 - Now click on the car to replace that area like this:
 - You can't drag the clone tool, like the brush because it will then just recreate the image from the point you targeted.
 - Now Press ALT and choose another area and click on the car to replace that area. Keep doing it until you get this:
- That's all for clone tool. I recommend check out the video tutorial for better demonstration.
