One of my scariest effect. Make your font look like bloods are dripping from them.

- Click here to see the video version of this tutorial.
- Open a new 500 x 500 PSD document.
- Press D on your keyboard to reset your foreground and background color.
- Go to Layer -> New -> Layer and click ok.
- Fill the background of the new layer with black. (#000000)
- Change your foreground color to (#FFFFFF).
- Type some text.
- So far it should look something like this:
  - Go to Image -> Rotate Canvas -> 90 Degree CW
  - Go to Filter -> Stylize -> Wind, choose direction From the right and click ok. - Go to Filter -> Wind (all the way top) or press CTRL + F, and apply it twice to make the wind effect deeper. - Go to Image -> Rotate Canvas -> 90 Degree CCW
  - So far your image should look something like below: - Go to Filter -> Distort -> Ripple and apply the following settings: - Change your foreground color to black (#000000), and background color to red (#fd0202).
  - Go to Filter -> Sketch -> Stamp, apply the following changes and click ok: - Final result should look something like below:
